Re: Docket No 18-353

Fourway Computer Products, is in favor of WISPA's petition for waiver of transition deadline to January 8, 2023.

Fourway Computer Products, Inc. (Fourway.Net) has been providing internet connectivity in northern Indiana and southern Michigan for more than 20 years. We are committed to providing the internet connectivity that our customers and neighbors require.

We have been utilizing the 3.65GHz spectrum to make that possible. We provide internet connections up to 25Mb using this spectrum and associated equipment. We currently have more than 120 network sites (towers) that are used to deliver the bandwidth our customers need.

We agree with WISPA's position on a waiver of the CBRS transition deadline for the reasons outlined below. We have hundreds of customers and dozens of sites that need to be transitioned by the deadline.

Currently very little equipment is ready for the transition. The equipment we plan to use is not yet ready (certified). The engineering required to perform the transition obviously cannot be completed without knowledge of the equipment available.

Operation will require the use of a SAS database. There are not yet any of these certified for use by the FCC.

Installer certification (required by part 96 rules), is not yet available.

GAA operation in the band is not yet authorized for the CBRS band.

We may have only a few months (one construction season) to perform all of the equipment updates required to implement the new CBRS systems. This likely will entail work at dozens of tower sites and hundreds of customers.

Roland Houin

President

Fourway Computer Products, Inc.
